Art Unit

1651

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 August 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 153-204 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 153-204 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- 1) ☐ Certified copies of the priority documents have been received.
 - 2) ☐ Certified copies of the priority documents have been received in Application No. _____.
 - 3) ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 8-2-04.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Applicant's Request for Continued Examination filed August 2, 2004, and the amendment filed July 15, 2004 has been received and entered into the case. Claims 183 – 204 have been added. Claims 153 – 204 are pending and have been considered on the merits. All arguments have been fully considered.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 153 – 204 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contains subject matter which was not described in the specification as originally filed in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. Specifically, the phrase “providing a remedial effect for a disease” is not described in the specification. While the specification does describe a composition that acts as a “preventative” or “remedy”, the specification fails to set forth such a “remedial effect for a disease” or define in any way, the claimed method for providing a remedial effect for a disease. This is a new matter rejection.

Art Unit: 1651

3. Claims 153 – 204 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a method for treating infection caused by E. coli and pseudorabies, does not reasonably provide enablement for treating any disease caused by any bacteria, fungus or virus. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. The level of predictability in treating infectious diseases is low, particularly regarding bacterial and viral infections such as anthrax, hepatitis, influenza, Ebola and HIV. While a composition may be effective to treat one viral, fungal or bacterial infection, it would certainly not indicate that the same composition would also be effective to treat any other infection. A person of ordinary skill in the art would not immediately recognize that administration of the instant composition would even have a chance of treating any bacterial, fungal or viral infection, simply because a single bacterial and viral infection is treatable with the same composition. The specification fails to set forth any direction or guidance as to how one in the art would go about determining which infections are treatable or even how one would be treated. It would place an undue burden of experimentation on a person in the art to find suitable infections that could be treated, as well as protocols for treatments therefor.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1651

5. Claims 153 – 204 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 153, 168, and 183 and their dependents are drawn to a method of treating however are rendered vague and indefinite for reciting “providing a remedial effect for a disease” because the phrase is not adequately defined by the claim language or specification. It is unclear what applicant intends to include and/or exclude from the scope of the method, since it is unclear what constitutes a “remedial effect”.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 153, 154, 168, 169 and 183 are rejected under 35 U.S.C. 102(b) as being anticipated by Bermudez et al. (WO 98-02041).

Applicant claims a method for remedying a disease caused by an infection in humans or animals, the method comprising orally administering an effective amount of sugar cane derived extract to a human or animal, wherein the infection is bacterial or fungal. The sugar cane extract is a fraction obtained by treating sugar cane juice, a liquid extracted from sugar cane or sugar cane derived molasses with column chromatography with a fixed carrier. Alternatively,

Art Unit: 1651

administration is via oral, IV, intramuscular, subcutaneous, intra-abdominal, intrarectal, hypoglossal, or instillation routes; with the proviso that when administration is oral the infection is fungal. Applicant finally claims the method wherein the infection is viral and the sugar cane extract has a MW of less than 1000.

Bermudez teaches methods for treating bacterial, fungal and viral infections, the method comprising administering sugar cane extracts (abstract,p.2). The extracts are obtained from sugar cane and are fractionated/purified with column chromatography (p.10), and are administered orally, topically, intrarectally, enterally, IV, intramuscularly and/or inhalation (p.6).

Although Bermudez does not teach the extract has a MW of less than 1000, the method steps are the same, therefore the product also appears to be the same. Therefore the extract of Bermudez must intrinsically have the claimed MW.

The reference anticipates the claimed subject matter.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

Art Unit: 1651

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claims 153 – 204 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bermudez, Kawai, Saska, Agar, Brewer and Kearny.

Applicant claims a method for remedying a disease caused by an infection in humans or animals, the method comprising orally administering an effective amount of sugar cane derived extract to a human or animal, wherein the infection is bacterial, fungal, or viral. The sugar cane extract is a fraction obtained by treating sugar cane juice, a liquid extracted from sugar cane or sugar cane derived molasses with column chromatography with a fixed carrier. Alternatively, administration is via oral, IV, intramuscular, subcutaneous, intra-abdominal, intrarectal, hypoglossal, or instillation routes; with the proviso that when administration is oral the infection is fungal. Alternatively, the extract is obtained by passing sugar cane juice, a liquid extracted from sugar cane or sugar cane derived molasses through a column packed with a synthetic adsorbent as the fixed carrier, eluting with water, methanol, ethanol, or mixtures thereof. The extract is a fraction which absorbs light at a wavelength of 420 nm, separated from other fractions obtained by column chromatography using an ion exchange resin, a cation exchange resin, a strongly acidic cation or the sodium or potassium form, or gel resin. The ion exchange is carried out in a pseudo moving bed continuous separation, and the fraction is further treated with electrodialysis. The extract is obtained by extracting bagasse with water, hydrophilic solvent or

Art Unit: 1651

mixtures thereof wherein the solvent is ethanol, or a mixture of ethanol and water at 60% or less ethanol, and 40% or more water. Finally, the extract is administered as food or animal feed.

Applicant finally claims the method wherein the infection is viral and the sugar cane extract has a MW of less than 1000.

Bermudez teaches methods for treating bacterial, fungal and viral infections, the method comprising administering effective amounts of sugar cane extracts (abstract, p.2,4). The extracts are obtained from sugar cane and are fractionated/purified with column chromatography (p.10), and are administered orally, topically, intrarectally, enterally, IV, intramuscularly and/or inhalation (p.6). Bermudez teaches the fractionation and purification can be accomplished by known methods in the art, including chromatography, ion exchange, lipophilic or hydrophobic resins. Bermudez further teaches that the fractions are typically analyzed for their physical-chemical nature, to include MS, laser desorption, infrared, ultraviolet, visible spectrometry and high-resolution nuclear magnetic resonance spectrometry (p.10). Although Bermudez does not teach the extract has a MW of less than 1000, the method steps are the same, therefore the product also appears to be the same. Therefore the extract of Bermudez must intrinsically have the claimed MW.

Bermudez does not teach each of the claimed limitations drawn to the specifics of the fractionation, purification and analysis. However, Bermudez clearly teaches that known methods in the art are used. At the time of the claimed invention, it would have been well within the purview of one of ordinary skill in the art to obtain the sugar cane extracts of Bermudez via the claimed methods, because they were routinely practiced in the art. In support, Kawai teaches methods for extracting sugar cane wherein sugar cane juice or sugar cane derived molasses is

Art Unit: 1651

treated with column chromatography packed with a synthetic adsorbent as a fixed carrier, eluted with water, methanol, ethanol or mixes thereof (abstract). The extracts are eluted with a mixed solvent of ethanol and water in a ratio of 50:50 to 60:40 (0017). The material is used in foods, feeds and medicines (0001). Further purification of the sugar cane extract is accomplished with ion exchange resins (0020), cation exchange resins (0021) and gel resins (examples). Kawai teaches that the obtained sugar cane extract can be used in foods, feed, and medicines (0031-0032). In addition, Saska teaches processes wherein sugar juice, or sugar derived molasses is treated with a strong cation exchange resin, in the form of sodium and/or potassium (abstract) and the eluted with water (col.2 line 21-29). Agar teaches methods for pulping plant materials such as bagasse (sugar cane extract), wherein extracts are recovered by treating the material with organic solvents (alcohol) (col.1 line 21-34, col.16 line 15-20), specifically with 60% ethanol and 40% water (col.4 line 24-26,35-50). Brewer teaches known methods for producing extracts of sugarcane using ion exchange, strongly acidic ion exchange resins (col.2 line 12-22), cations resins of the sodium form (col.2 line 33-39), and electrodialysis (col.3 line 8-10). Finally, Kearney teaches typical separation techniques of sugar extracts include ion exchange resins, continuous simulated moving bed systems (col.1 line 30-50). Moreover, at the time of the claimed invention, one of ordinary skill in the art would have been motivated by routine practices to obtain the sugarcane extract of Bermudez as claimed, since they well known procedures, as evidenced by the cited references.

It is noted that if the claimed product is the same or obvious from a product in the prior art (i.e. the product disclosed in the cited reference), the claim is unpatentable even though the reference product was made by a different process. When the prior art discloses a product which

Art Unit: 1651

reasonably appears to be identical with or slightly different than the claimed product-by-process, rejections under 35 U.S.C 102 and/or 35 U.S.C 103 are proper (MPEP 2113). Although the instant claims are drawn to a method, the method merely comprises administering such a product by process.

It is further noted that the instant claims read on eating sugar, since the extracts are obtained by the same methods practiced to obtain sugar (see cited references) and the methods are preventative in nature.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ruth A. Davis whose telephone number is 571-272-0915. The examiner can normally be reached on M-H (7:00-4:30); altn. F (7:00-3:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Wityshyn can be reached on 571-272-0926. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
